

Assignment: Please print out the source code to a first page of your own personal website.

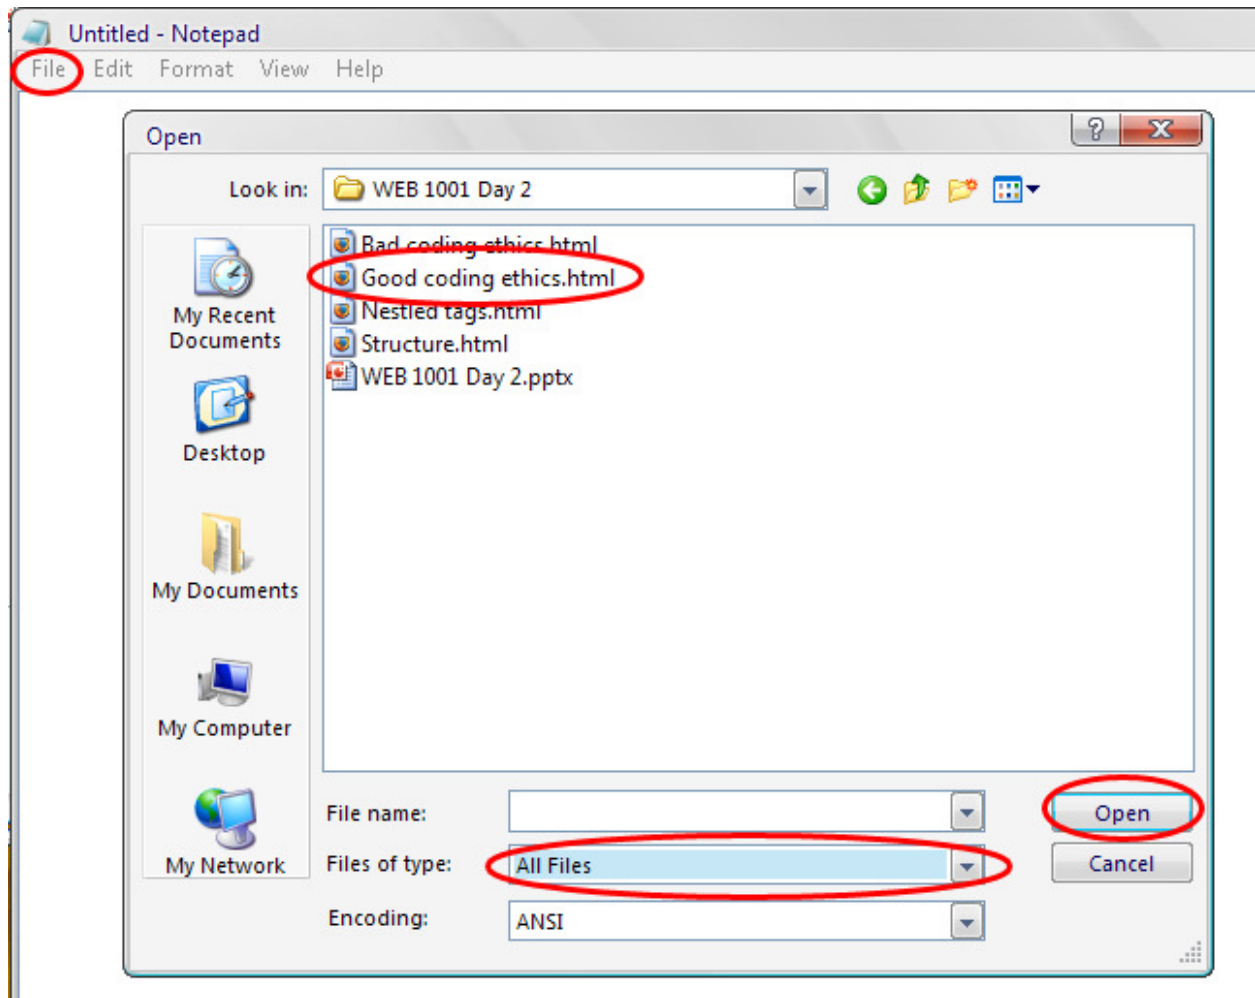

To do this, open up your HTML document in Notepad, then click *File*, then click *Print*.

If your HTML document will not open up in Notepad by default, right-click your HTML document and select: Open With... and click "Notepad."

You can also open Notepad and select: 'File,' then 'Open...,' and select "All Files (*.*)" and open the HTML document.

Your web page should include information about yourself. Recommended ideas:

- About yourself
- Hobbies
- Likes
- Dislikes
- Music
- Movies
- TV

You should make use of all the tags we learned in class. Feel free to expand on it and look up new tags or put in more cool information. You can also add images, that's a bonus.

You will pass this assignment if your HTML markup looks good, is organized, and validates correctly.
