

```
1 <html>
2 <head>
3   <title>More styles</title>
4   <style type="text/css">
5     p { width: 200px; border:1px solid black; padding:10px 5px 4px 3px; }
6   </style>
7 </head>
8 <body>
9   <p>CSS allows you to do many things, but one neat thing are borders. Borders are
10  useful when used in conjunction with the "width" and "height"
11  attributes.</p>
12  <p>All paragraphs on this page are 200px wide and have a black border.</p>
13
14  <p>In addition, I've given the paragraphs 10 pixels of padding (spacing), so that
15  it looks nicer.</p>
16  <p>You should know that the total width of the paragraphs is 220px because padding
17  adds on to the width and height.</p>
18  <p>Later you will learn about margins and how to use them so as not to break your
19  layouts.</p>
20 </body>
</html>
```
